

Does your reliability program meet your maintenance strategy and profit goals?

Do you want improved maintenance planning?

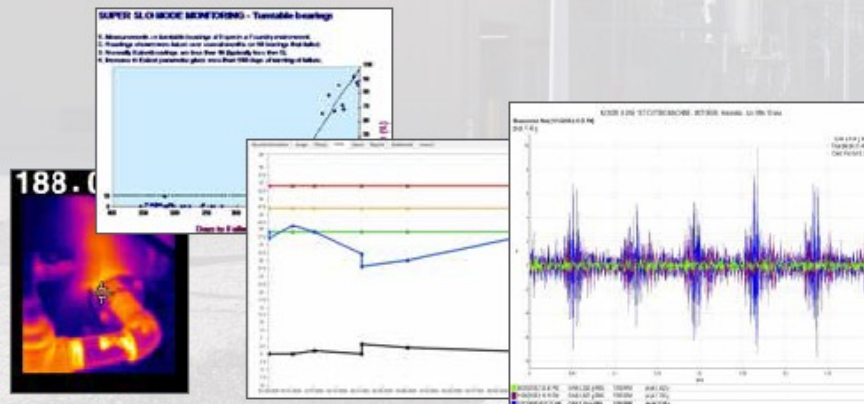

Do you want to minimize unplanned shutdowns that can cost thousands of dollars per event?

We employ various technology layers to detect defects early enough allowing you time to plan corrective action and avoid costly shutdowns.

Integral to the program is an interactive reporting platform allowing the end user to view their data ANYTIME ANYWHERE without having to scroll through pages of static documents.

Lubrication Management & Surveys

- Mechanical wear due to contamination responsible for more than 50% of machine failure
- Proper management of the lubricants reduces wear rate and extends machine life
- Realize cost reduction and improved profit margins
- We assess how your lubricants are managed and recommend improvements

Vibration, Ultrasonic, Acoustic Emission, and Thermography

- Best set of tools to minimize unplanned shutdowns
- Monitor, detect, and trend machine health
- Find defects and degradation mechanisms early enough to prevent sudden failures
- These technologies can be deployed in any combination to meet your maintenance strategy

Data Management & Analytics

- Maintenance and Reliability are data rich but are you getting its full potential?
- Unlock the real value by organizing and visualizing your data
- Interactive, anywhere and anytime access, adding value and improving decision making process
- Insight into your business and KPIs like never before
